MEETING MINUTES

Project: “Fábula Dental” Management System

Date: May 30, 2026

Time: 12:00 PM

Modality: In-person

1. Meeting Location

Clinic: Fábula Dental

Address: Av. Gral. Rumiñahui & Isla Isabela, Edificio Platinum Plaza, Office 5, 171102

2. Participants

- Dra. Ivonne Moya – Pediatric Dentist
- Team CodeXplorers:
    - Andrés Cárdenas
    - Kerly Chuqui
    - Victoria Díaz

3. Meeting Objective

To gather and validate the functional requirements of the web system for the pediatric dental clinic, defining the main modules (features), user roles, and key operational workflows.

4. Topics Discussed

4.1 System Modules Definition (Features)

It was agreed to structure the system into three main modules:

- Patient Registration
- Medical Supplies Management
- Payment Registration

Each module will have a single responsible role.

4.2 User Access and Authentication

The system will require user authentication through a login process.

Each module will only be accessible according to the assigned role:

- Dentist → Patient Registration
- Administrator → Supplies Management

- Receptionist → Payment Registration

Access control will be integrated within each module.

4.3 Patient Registration

The system must allow:

- Registration of patient personal data
- Inclusion of a legal guardian in case of minors
- Consultation of registered patients

It was clarified that payment information must not be entered in this module, as it will be automatically linked from the payment module.

4.4 Medical Supplies Management

An inventory control system will be implemented including:

- Supplies registration
- Available quantity
- Order date
- Expiration date

The main objective is to prevent losses due to expiration or overstocking.

4.5 Payment Registration

The system must allow:

- Recording patient payments
- Selection of payment method (cash, card, transfer)
- Handling partial payments (down payments) and final payments

It was agreed that:

- A down payment must be made before treatment
- The remaining balance will be paid afterward
- The system will automatically calculate pending balances

5. Agreements Reached

- The system will consist of three clearly defined main features.
- Each module will have a single assigned role.
- Login-based access control will be implemented.
- Payments will follow a partial and full payment logic.
- Inventory will include date control to optimize resources.

- Data will be centralized in a database and interconnected across modules.

6. Next Steps

- Development of use case diagrams
- Design of the database model (MongoDB)
- Development of the initial system prototype
- Functional validation with the clinic

7. Observations

Dr. Ivonne Moya emphasized the importance of:

- Keeping the system simple and user-friendly
- Avoiding data duplication
- Prioritizing payment control and proper inventory management
