

SOFTWARE CLIENT REVIEW AND PILOT ACCEPTANCE REPORT

American Latin Class Management System

CLIENT REVIEWER	Juan Pablo Hidalgo
CLIENT ROLE	Academy Director and Former Dancer
DOCUMENT PREPARATION	Transcribed, translated, structured, and quality-formatted by the Software Development Team
REVIEW DECISION	Conditionally Approved for Controlled Pilot Deployment
ISSUE DATE	July 13, 2026

DOCUMENT STATUS

CLIENT REVIEW FORMALIZED - AWAITING SIGNATURE

STATEMENT OF AUTHORSHIP AND FIDELITY

The substantive review, opinions, operational observations, and pilot recommendation contained in this report originate from Juan Pablo Hidalgo in his capacity as Academy Director. The Software Development Team transcribed the source review, translated it into English, organized it into a software engineering report structure, and introduced identifiers for traceability. No electronic or handwritten signature has been fabricated.

CONFIDENTIAL - CLIENT VALIDATION RECORD

1. Document Control

DOCUMENT ID	ALC-SCR-001
DOCUMENT TITLE	Software Client Review and Pilot Acceptance Report
SYSTEM UNDER REVIEW	American Latin Class Management System
CLIENT REVIEWER	Juan Pablo Hidalgo
CLIENT POSITION	Academy Director and Former Dancer
PREPARED BY	Software Development Team
VERSION	1.0
ISSUE DATE	July 13, 2026
CLASSIFICATION	Confidential - Client Validation Record
APPROVAL STATUS	Conditionally Approved for Controlled Pilot Deployment

1.1 Revision History

Version	Date	Prepared by	Description	Status
0.1	Source review	Juan Pablo Hidalgo	Operational and managerial review of the system from the Academy Director perspective.	Source input
1.0	July 13, 2026	Software Development Team	English transcription, formalization, traceability identifiers, acceptance controls, and approval section.	Issued for client sign-off

1.2 Distribution and Ownership

Stakeholder	Role in this document	Expected action
Juan Pablo Hidalgo	Client reviewer and business authority	Confirm that the report faithfully represents his review and sign or request corrections.
Software Development Team	Document preparer and system supplier	Resolve conditions, maintain evidence, and execute pilot readiness activities.
Project / Academic Stakeholders	Authorized recipients	Use this report as validation evidence and not as proof of production certification.

2. Purpose, Scope, and Engineering Basis

2.1 Purpose

This report records and formalizes the client review performed by Juan Pablo Hidalgo. Its purpose is to determine whether the American Latin Class Management System supports reliable academy operations, preserves traceability, provides useful information to each user role, and is sufficiently mature to proceed to a controlled pilot.

2.2 Scope of Review

- **Academic operations:** groups, schedules, enrollments, attendance, absence justification, evaluations, scholarships, and promotions.

- **Teaching staff control:** assigned sessions, check-in/check-out, payable time, and historical rate evidence.
- **Financial operations:** student charges, status consistency, reversals, receivables, and reconciliation.
- **Admissions and growth:** prospect pipeline, trial classes, enrollment conversion, and loss reasons.
- **Governance and assurance:** role-based access, audit records, data quality alerts, backups, privacy, and production readiness.

2.3 Applied Software Engineering Principles

The Software Development Team structured this report using common software engineering controls for stakeholder validation, acceptance criteria, risk management, traceability, verification, validation, and controlled transition. The report is aligned in principle with the following reference frameworks:

- **ISO/IEC/IEEE 12207:2017** - software life-cycle processes, including verification, validation, transition, operation, maintenance, risk, and quality assurance.
- **ISO/IEC/IEEE 29148:2018** - stakeholder needs, requirements quality, acceptance conditions, and traceability.
- **ISO/IEC 25010:2023** - software product quality considerations, including functional suitability, reliability, usability, security, maintainability, compatibility, performance efficiency, flexibility, and safety.

CONFORMITY LIMITATION

This document applies selected principles from the referenced standards. It does not claim formal certification, full conformity, legal approval, penetration-test clearance, accounting certification, or production authorization.

2.4 Review Method and Evidence Status

Evidence type	Status	Interpretation
Director review narrative	Available	Primary source for the business and operational assessment.
System behavior and rules described in the review	Reviewed at functional level	Provides confidence in the intended controls, subject to execution evidence.
External production environment	Not certified by this report	HTTPS, secrets, infrastructure, database exposure, and deployment configuration require separate verification.
Real user acceptance evidence	Pending	Director, teacher, and student acceptance tests must be completed in a pilot environment.
Backup restoration evidence	Pending	A successful restoration test is required before production approval.

3. Executive Client Assessment

3.1 Director Statement

As Academy Director and a former dancer, the reviewer is primarily concerned with whether the system protects the student experience, supports teaching quality, and provides a trustworthy view of academy operations without depending on informal messages, personal memory, or disconnected spreadsheets.

The reviewed solution addresses that need effectively. Its principal strength is the connection between real operating events: a student enrolls in a group with controlled capacity, attends specific sessions, may justify an absence, receives an evaluation supported by evidence, and generates financial transactions that cannot be silently altered. Likewise, a teacher records working time against an assigned class, and management receives indicators linked to identifiable source records.

3.2 Review Decision

CLIENT DECISION - CONDITIONAL APPROVAL

The system is favorably assessed for a controlled pilot deployment. It is not approved for an unplanned academy-wide production launch. Production authorization remains conditional on external security closure, validation with real data, user acceptance testing, backup restoration evidence, privacy controls, and reconciliation with official accounting and payroll processes.

3.3 Decision Summary

Decision area	Assessment	Client position
Business fit	Favorable	The system supports the academy's academic, operational, commercial, and administrative workflows.
Control and traceability	Favorable	Sensitive corrections, reversals, role access, and historical records are designed to remain explainable.
Pilot readiness	Conditionally favorable	Proceed after critical readiness actions and acceptance evidence are completed.
Full production readiness	Not yet approved	External security, infrastructure, migration, privacy, continuity, and legal reconciliation remain open.

4. Business Problems Addressed

4.1 Academic Operations and Scheduling Control

The system turns class planning into a verifiable operation. Each group has an academy location, level, teacher, and capacity. Sessions are scheduled with defined times. Enrollment history is retained, and any applicant exceeding capacity is moved to a controlled waiting list. These controls reduce oversold groups, attendance by students without a valid enrollment, double-booked teachers, and promotion decisions based only on memory.

Attendance is recorded from the session roster. It may be saved as a draft and finalized after the class. A later correction requires appropriate authority and a documented reason. This supports a fundamental governance rule: errors may be corrected, but historical evidence must not be silently rewritten.

4.2 Student Monitoring and Fair Academic Decisions

Students can review their classes, attendance, payments, and absence-justification requests. Management retains two distinct attendance perspectives:

- **Physical attendance:** records what actually occurred - present, late, or absent.
- **Adjusted attendance:** removes approved justified absences from the calculation denominator without falsely recording that the student was physically present.

This separation protects academic truth while allowing fair treatment of medical incapacity or another valid circumstance. Scholarship and promotion decisions use finalized sessions only and require a minimum of eight countable sessions. Evaluation outcomes are retained as supporting evidence. The system supports consistent decisions but does not replace the artistic and pedagogical judgment of the director or teacher.

4.3 Teaching Staff Control and Pay Evidence

A teacher may check in only for an active assigned session and within a reasonable time window around the class. Check-out calculates payable minutes within configured limits and preserves the rate applicable at that moment. This avoids reconstructing weeks later which rate applied or accepting open work records unrelated to a scheduled class.

The control should be communicated as protection for both parties: teachers can verify the work performed, and the academy can explain the calculation used for payment.

4.4 Revenue, Receivables, and Reversals

Charges are linked to the student and academy location. The system checks duplicate charges, billing periods, values, and consistency between payment status and payment date. A paid charge cannot be edited as though it never existed. When a correction is required, the system creates a linked negative reversal with a reason.

For management, this produces a more reliable operating ledger than directly changing spreadsheet cells. The module remains an academy operational ledger. Before it is used as official accounting, tax invoicing, or legal payroll evidence, it must be integrated or reconciled with the legally required financial processes in Ecuador.

4.5 Admissions and Growth Management

Prospective student requests move through explicit states: pending, contacted, trial class scheduled, enrolled, or lost. Scheduling a trial requires a date; closing an opportunity as lost requires a reason; marking it as enrolled requires an actual student record. This allows management to understand inquiry volume, follow-up effectiveness, and where prospective students disengage.

4.6 Responsibility, Segregation of Duties, and Auditability

Sensitive operations generate records of who acted, what item was affected, when the action occurred, and the resulting status or reason. Each role receives only the access required for its function and academy location. Audit records are intended to support investigation of attendance corrections, access changes, financial reversals, and academic decisions.

5. Expected Director Operating Workflow

Operational moment	Expected control activities
Start of day	Review consolidated or location dashboard; inspect data-quality alerts, overdue charges, occupancy, and waiting lists; confirm daily sessions, assigned teachers, and pending trial requests; resolve exceptions first.
Before and during classes	Confirm valid group capacity and active students; teachers review assigned sessions and check in; session roster is generated from valid enrollments; teachers record present, late, and absent statuses and may save a draft.
End of class	Teacher confirms all student statuses and finalizes attendance; system records who closed the session and when; teacher checks out; any later correction is performed by an authorized director with a reason and audit history.
Weekly review	Decide justification requests; review prospects and trial classes; compare occupancy and waiting lists; inspect receivables and authorized corrections; identify unfinalized sessions, open teacher records, and poor-quality data.
Monthly close	Compare gross revenue, reversals, and net revenue; review receivable aging; validate payable teacher time against finalized sessions; analyze attendance, punctuality, occupancy, and conversion by location; review scholarship/promotion candidates; reconcile with external accounting and payroll.

6. Business Rules That Provide Client Confidence

ID	Situation	System control	Management value
BR-01	Group capacity reached	Next enrollment is moved to the waiting list under controlled rules.	Prevents promising capacity the academy cannot provide.
BR-02	Student changes or returns to a group	A new enrollment episode is created and history is preserved.	Explains group membership for any date.

ID	Situation	System control	Management value
BR-03	Class is scheduled	Duration, active group, and teacher/group time conflicts are validated.	Reduces scheduling conflicts that damage the experience.
BR-04	Attendance is finalized	Roster must match valid students and finalization occurs at the end of the session.	Ensures reports depend on classes actually delivered.
BR-05	Final attendance is corrected	Director authority, reason, and audited version are required.	Allows correction without losing accountability.
BR-06	Absence justification is approved	Physical absence is retained and the academic denominator is adjusted.	Combines operational truth with fair treatment.
BR-07	Scholarship or promotion is evaluated	Finalized sessions, minimum evidence, and saved results are required.	Prevents premature or indefensible decisions.
BR-08	Teacher records work time	Record must correspond to the assigned session and schedule; the historical rate is retained.	Improves payment transparency.
BR-09	Paid charge requires correction	Original charge is not edited; a linked reversal is created.	Protects financial history.
BR-10	Location director operates the system	Access is restricted to assigned locations; global changes remain reserved.	Reduces error and unnecessary information exposure.

7. Management Indicators Considered Useful

7.1 Student Experience and Retention

- **Physical attendance:** percentage of actual presence, including lateness according to the approved formula.
- **Adjusted attendance:** result after excluding approved justified absences from the countable universe.
- **Punctuality:** separates repeated late arrival from full absence.
- **Monthly trend:** shows whether attendance behavior is improving or deteriorating over time.

7.2 Capacity Utilization

- **Occupancy:** active or trial students compared with available capacity.
- **Waiting list:** demand that the location cannot currently serve.
- **Capacity by group:** supports decisions to open another time slot, move rooms, or adjust the offering.

High occupancy is not automatically positive. When crowding reduces safe movement, dancing space, or teacher attention, the configured capacity should be lowered. The data informs the decision; the academy defines the quality threshold.

7.3 Financial Health

- **Gross revenue:** paid charges before corrections.
- **Reversals:** identifiable negative adjustments.
- **Net revenue:** result after reversals.
- **Receivables and aging:** pending or overdue balances and their age.
- **Teacher payment detail:** payable minutes, historical rate, and total per session.

Before monthly close is accepted, these figures must be reconcilable to a sample of individual source transactions.

7.4 Commercial Growth

- Requests received.
- Prospects contacted.

- Trial classes scheduled.
- Effective enrollments.
- Lost opportunities and documented reasons.

The funnel should improve follow-up discipline. It must not be used to pressure staff into recording an enrollment that does not yet exist.

7.5 Information Quality

Alerts for unfinalized sessions, open teacher work records, inconsistent charges, missing references, capacity exceptions, or abandoned prospects are management indicators in their own right. A dashboard with no alerts does not prove perfection; it indicates only that the configured automated controls found no known exceptions at that time.

8. Role-Based Usefulness and Usability Expectations

Role	Primary tasks	Director assessment
General Director	Compare locations, manage structure, review reports, audit records, reversals, and academic decisions.	Consolidated visibility is useful and high-impact changes remain separated.
Location Director	Manage students, groups, sessions, charges, justifications, and prospects for assigned locations.	Location scoping reduces noise and limits errors outside assigned responsibility.
Teacher	View assigned classes, check in/out, and complete the group roster.	Workflow is aligned with the real class moment and reduces unnecessary administration.
Student	Review groups, upcoming classes, attendance, payments, and submit justifications.	Improves transparency and reduces repetitive reception inquiries.
Technical Administrator	Configure access and provide exceptional support.	Must be used sparingly and not as the director's daily operating account.

USABILITY VALIDATION REQUIREMENT

Real-user testing must confirm that labels, messages, navigation order, error handling, and irreversible actions are understandable without developer assistance. Charts must provide a table or drill-down path so that users can verify the underlying values and users are not forced to rely on visual interpretation alone.

9. Pre-Production Risk and Readiness Register

ID	Risk / condition	Priority	Required treatment	Owner	Status
RSK-01	External credentials may have been exposed in history or prior environments.	Critical	Revoke and rotate passwords, tokens, keys, and secrets. Removing them from a file does not invalidate previously exposed credentials.	Security owner	Open
RSK-02	Production environment configuration has not been certified by this review.	Critical	Verify HTTPS, domain, environment variables, secure cookies, origin policy, restricted database access, and absence of public administration tools.	DevOps / Security	Open
RSK-03	Database migration or restoration failure could affect production data.	High	Execute migrations with backup, version evidence, rollback plan, and tested restoration. Avoid ad hoc direct production table changes.	Database owner	Open
RSK-04	Initial data may contain duplicates or inaccurate	High	Clean and validate students, locations,	Business + Data owner	Open

ID	Risk / condition	Priority	Required treatment	Owner	Status
	records.		groups, balances, rates, and enrollments before import.		
RSK-05	Human acceptance has not been demonstrated with real devices and users.	High	Test complete workflows with at least one director, one teacher, and one student in a pilot location.	QA / Product owner	Open
RSK-06	Privacy obligations for photos, medical evidence, and minors require governance.	High	Define controller responsibilities, retention periods, data-subject request handling, consent, and evidence rules under applicable law.	Data protection owner	Open
RSK-07	Service interruption could stop academy operations.	High	Configure automated backups, monitoring, alerts, support, tested restoration, and a temporary manual continuity procedure.	Operations owner	Open
RSK-08	Operational finance and teacher records may be mistaken for official legal accounting or payroll.	High	Define reconciliation or integration with official accounting, invoicing, tax, and payroll processes.	Finance / Legal	Open
RSK-09	Uncontrolled configuration changes could alter capacity, rates, scholarships, roles, or access.	Medium	Assign change authority, maintain audit review, approve configuration changes, and deactivate inactive accounts.	System owner	Open

10. Client Acceptance Criteria for Pilot Authorization

The client considers the system acceptable for a controlled pilot only when the following criteria are demonstrated with test data and retained evidence. Each criterion must be marked Pass, Fail, or Not Executed, and linked to objective evidence such as screenshots, test records, database entries, audit logs, or reconciliation worksheets.

10.1 Academic Operations

Criterion ID	Acceptance condition	Result	Objective evidence
ACR-ACA-01	A group can be created only with valid location, level, teacher, and capacity data.	Not Executed	Evidence reference: _____
ACR-ACA-02	An enrollment within capacity becomes active; an enrollment exceeding capacity is placed on the waiting list.	Not Executed	Evidence reference: _____
ACR-ACA-03	The same teacher or group cannot be scheduled in overlapping time slots.	Not Executed	Evidence reference: _____
ACR-ACA-04	A teacher sees only authorized classes and can complete a roster from a mobile device.	Not Executed	Evidence reference: _____
ACR-ACA-05	Final attendance requires a complete valid roster and cannot silently return to draft status.	Not Executed	Evidence reference: _____
ACR-ACA-06	An attendance correction retains actor, date, reason, and audit evidence.	Not Executed	Evidence reference: _____
ACR-ACA-07	An approved justified absence preserves the original physical absence and correctly adjusts the attendance indicator.	Not Executed	Evidence reference: _____

10.2 Finance and Teaching Staff

Criterion ID	Acceptance condition	Result	Objective evidence
ACR-FIN-01	The system prevents duplicate active charges for the same student, period, and concept.	Not Executed	Evidence reference: _____
ACR-FIN-02	Payment, cancellation, and reversal operations produce the expected history and the net value can be manually reconciled.	Not Executed	Evidence reference: _____
ACR-FIN-03	A location director cannot perform a reversal reserved for global authority.	Not Executed	Evidence reference: _____
ACR-STF-01	Teacher check-in works only for an assigned session and check-out calculates the expected minutes and rate.	Not Executed	Evidence reference: _____
ACR-STF-02	The teacher payment report matches a manually calculated sample.	Not Executed	Evidence reference: _____

10.3 Management and Growth

Criterion ID	Acceptance condition	Result	Objective evidence
ACR-MGT-01	The admissions funnel requires a trial date, a loss reason, and an actual student record before conversion to enrolled.	Not Executed	Evidence reference: _____
ACR-MGT-02	Reports update correctly by period and location.	Not Executed	Evidence reference: _____
ACR-MGT-03	Attendance, occupancy, receivables, gross revenue, reversals, and net revenue can be traced to source records.	Not Executed	Evidence reference: _____
ACR-MGT-04	Scholarship and promotion logic excludes draft sessions and enforces the defined minimum evidence.	Not Executed	Evidence reference: _____
ACR-MGT-05	Data-quality alerts identify a deliberately introduced incomplete or inconsistent test record.	Not Executed	Evidence reference: _____

10.4 Security, Privacy, and Continuity

Criterion ID	Acceptance condition	Result	Objective evidence
ACR-SEC-01	Each role attempts to access own-location, other-location, and global data; unauthorized access is rejected.	Not Executed	Evidence reference: _____
ACR-SEC-02	Password change invalidates previous sessions, and inactive accounts cannot continue operating.	Not Executed	Evidence reference: _____
ACR-SEC-03	External credentials are rotated and the production environment does not expose the database or administrative console.	Not Executed	Evidence reference: _____
ACR-BCP-01	Valid HTTPS, automated backup, and a successful restoration test	Not Executed	Evidence reference: _____

Criterion ID	Acceptance condition	Result	Objective evidence
	are demonstrated.		
ACR-PRV-01	The responsible data owner approves privacy, retention, and evidence-handling rules.	Not Executed	Evidence reference: _____
ACR-BCP-02	The operating team knows the support contact and temporary procedure to use during service interruption.	Not Executed	Evidence reference: _____

10.5 Usability and Accessibility

Criterion ID	Acceptance condition	Result	Objective evidence
ACR-USA-01	Director, teacher, and student complete their three principal tasks without developer assistance.	Not Executed	Evidence reference: _____
ACR-USA-02	The experience works on mobile and desktop with readable text, visible keyboard focus, and actionable error messages.	Not Executed	Evidence reference: _____
ACR-USA-03	Each chart provides a tabular detail or clear drill-down route to verify the displayed value.	Not Executed	Evidence reference: _____
ACR-USA-04	Users can distinguish Save Draft, Finalize, Cancel, and Reverse before confirming an irreversible action.	Not Executed	Evidence reference: _____

11. Recommended Deployment Strategy

- 1. Close external security and infrastructure controls.** Rotate credentials, prepare the target environment, apply controlled migrations, and test backup restoration.
- 2. Perform pre-production acceptance.** Execute all criteria in Section 10 using a small but representative data set and record every deviation.
- 3. Pilot one academy location.** Operate for at least one complete class cycle and one payment close while retaining the previous operating mechanism as a temporary fallback.
- 4. Expand based on evidence.** Reconcile pilot results, correct workflow friction, train users by role, and add the remaining locations only after the pilot decision gate is passed.

11.1 Pilot Success Measures

Measure	Expected interpretation
Attendance finalized on time	Percentage should increase and unfinalized sessions should decline.
Prospects without follow-up	Count should decline as ownership and next actions become visible.
Financial reconciliation differences	Differences should be identified, explained, and reduced to an accepted tolerance.
Open teacher work records	Count should decline and remaining exceptions should have an owner.
Tasks still requiring external spreadsheets or messages	Count should decrease or be explicitly accepted as an external integration boundary.

11.2 Pilot Decision Gate

GO / NO-GO RULE

Expansion beyond the pilot location should occur only when critical risks are closed, acceptance criteria have passed or have formally accepted deviations, financial results reconcile, user workflows operate without permanent developer support, and a named business owner accepts the remaining residual risks.

12. Review-to-Control Traceability Matrix

Client concern	Report evidence	Business rule reference	Acceptance reference
Student experience and teaching quality	Sections 4.1-4.2, 7.1, 8	BR-03 to BR-07	ACR-ACA-01 to ACR-ACA-07; ACR-USA-01 to ACR-USA-04
Capacity and enrollment control	Sections 4.1, 7.2	BR-01, BR-02	ACR-ACA-01 to ACR-ACA-03
Teacher work and payment evidence	Sections 4.3, 7.3	BR-08	ACR-STF-01, ACR-STF-02
Financial integrity and reversals	Sections 4.4, 7.3	BR-09	ACR-FIN-01 to ACR-FIN-03
Admissions and commercial follow-up	Sections 4.5, 7.4	Operational state controls	ACR-MGT-01
Access, audit, and governance	Sections 4.6, 8, 9	BR-05, BR-10	ACR-SEC-01 to ACR-SEC-03
Production readiness and continuity	Sections 9, 11	Risk treatments	ACR-BCP-01, ACR-BCP-02
Privacy and evidence handling	Section 9	Risk treatment RSK-06	ACR-PRV-01

13. Client Conclusion

From the director's perspective, a dance academy is not managed through numbers alone. The atmosphere, student progress, confidence in teachers, and the energy of each class remain essential. However, growth without clear and trustworthy records eventually damages those same qualities.

The system provides a solid basis for professionalizing academy management without removing human judgment. Its strongest qualities are enrollment history, finalized attendance with auditable corrections, capacity control, financial reversals, commercial follow-up, role separation, and reports supported by data-quality alerts.

FINAL RECOMMENDATION

Approve the American Latin Class Management System for a controlled pilot, subject to completion of the open security, data, user acceptance, privacy, continuity, and reconciliation conditions. Decide academy-wide expansion only after observing and evaluating a complete real operating cycle.

14. Client Confirmation and Sign-Off

By signing below, the client reviewer confirms that this English report faithfully reflects the substance of the review provided to the Software Development Team. The signature confirms the review record and pilot recommendation; it does not waive the open conditions or certify production readiness.

Appendix B. Formalization Note

This report was prepared from the Academy Director review supplied in Spanish. The Software Development Team translated and reorganized the content to improve professional presentation, traceability, reviewability, and use as software validation evidence. The report preserves the original client position: favorable assessment for a controlled pilot, subject to unresolved production-readiness conditions.
