1. Meeting Information

Meeting Type	Customer Evaluation Meeting
Project	Medical Management System – Fábula Dental
Date	11 July 2026
Location	Demonstration Session
Facilitator	Development Team
Customer Representative	Dr. Ivonne Moya
Version	1.0

2. Development Team

The Medical Management System was designed, implemented, and evaluated by the software development team **CodeXplorers**.

Team Member	Role
Andrés Cárdenas	Team Leader / Software Developer
Kerly Chuqui	Software Developer
Victoria Díaz	Software Developer

The team collaborated throughout the software development lifecycle, including requirements analysis, system design, implementation, testing, documentation, and customer validation. The customer evaluation meeting summarized in this document reflects the final usability assessment performed after the successful completion of the project's primary functionalities.

3. Meeting Objective

The objective of this meeting was to review the usability evaluation conducted after the customer tested the Medical Management System. The session focused on collecting feedback regarding usability, navigation, workflow efficiency, interface design, and overall user experience. The observations obtained during this evaluation will support future improvements before the production release.

Name	Role
Software Development Team	Developers
Dr. Ivonne Moya	Customer / End User
Project Supervisor	Observer

4. Attendees

5. Evaluation Scope

The customer evaluated the following software modules:

- Patient Management
- Payment Registration
- Inventory Management
- Expiration Alerts
- General Navigation
- User Interface Design
- Overall User Experience

The evaluation was performed using a structured usability questionnaire with Likert-scale questions and open-ended comments.

6. Evaluation Results

6.1. General Usability

The customer indicated that the application is intuitive and easy to learn despite previously managing clinical information using paper records or spreadsheets.

The interface was considered organized, visually clean, and suitable for everyday clinical activities.

Main Results

- Easy to understand.
- Smooth navigation.
- Short learning curve.
- High confidence while using the application.

6.2. Patient Management Module

The patient registration and search functionalities were successfully completed without significant difficulties.

Findings

- Patient registration was straightforward.
- Searching patients was simple.
- Forms were organized and easy to complete.
- No major usability issues were identified.

6.3. Payment Registration Module

The payment workflow was evaluated positively.

Findings

- Payment registration process was clear.
- Navigation between screens was intuitive.
- Required information was appropriate.
- Data entry was efficient.

6.4. Inventory Management Module

The inventory module received the most positive comments from the customer.

Findings

- Inventory alerts were considered highly useful.
- Expiration notifications improve inventory control.
- The feature helps avoid unnecessary purchases.
- Stock monitoring is easier than previous methods.

7. Customer Feedback

7.1. Positive Observations

The customer emphasized several strengths of the system.

- Clean interface.
- Modern appearance.
- Easy navigation.
- Well-organized workflow.
- Useful inventory alerts.
- Confidence while using the application.
- Consistent forms and buttons.
- Good integration among system modules.

7.2. Suggested Improvements

Although the overall evaluation was positive, two improvements were suggested.

7.2.1 Language Consistency

Some interface elements alternate between English and Spanish.

Recommendation

Standardize all interface labels into a single language to improve consistency.

7.2.2 Authentication Workflow

The customer observed that multiple login procedures are required when accessing different functionalities.

Recommendation

Implement a unified authentication mechanism allowing users to log in only once per session.

8. Development Team Assessment

Based on the customer's evaluation, the development team concluded that:

- The system successfully meets its functional objectives.
- Core workflows are efficient and easy to complete.
- The application provides a positive user experience.
- No critical defects were identified during testing.
- Suggested improvements correspond to usability enhancements rather than functional problems.

9. Action Items

ID	Action	Priority
A-01	Standardize interface language	Medium
A-02	Simplify authentication workflow	Medium
A-03	Review multilingual interface labels	Low
A-04	Maintain inventory alert functionality	High

10. Meeting Conclusion

The customer expressed overall satisfaction with the Medical Management System and considered it appropriate for supporting daily clinical operations.

The usability evaluation demonstrated that the software is intuitive, reliable, and easy to navigate. The only recommendations focused on improving language consistency and simplifying the authentication process. These enhancements have been incorporated into the project's improvement backlog for future iterations.

11. Evaluation Evidence

To validate the usability and functionality of the Medical Management System, the development team conducted a customer evaluation using a Google Forms questionnaire. The survey collected qualitative and quantitative feedback regarding the system's usability, navigation, interface design, and overall user experience.

This document serves as supporting evidence for the conclusions presented in these meeting minutes and demonstrates the customer's evaluation of the system after completing the usability testing session.

Meeting Status:

Accepted with Minor Improvement Requests
